Just to let yall know.. I was on the [BA] toasted server... which is a renguard server.. we had played 4 or 5 really good games. and all of a sudden some noob who was in game started gettign insta kills.. map was Hourglass I was nod... apc coming around corner into gdi base.. and as any good plyer knows u can make guard hit wall 1st shot... then hug right cliff and not get hit till u come into the clearing.. well boom my apc died.. and even IF it was the guard (it wasnt) we all know u can almost do laps in gdi base with an apc on hourglass. So we watched him and his score jumped to 10k from killing our harvey... so we KNOW he was using final alert... and that server IS A RENGUARD server so.. yall have more work to do. I run renguard to get on servers using it.. but why bother?

1. "FinalAlert" is a cheat for renalert servers, not renegade servers.
2. Your claim is pretty much worthless since it contains no valuable information such as which server it was, the name of the host, the name of the cheater, etc...you might as well have just posted "OMG I WUZ IN A SERVER AND SOMEONE CHEATORED RENGUARD IS TEH SUX!"
3. Sometimes servers say they are RG but they are not, also sometimes a server can usually be a RG server, but for some reason be disconnected from the RG network.

In short, if RG is running on the server, Final Renegade, other objects.ddb cheats, etc do not work.

Note: I'm not saying that you didn't witness someone cheating in a server, I'm simply saying that server was not running RG. If you can provide the server name, host name, cheater name, we can investigate further.

Blazer1. "FinalAlert" is a cheat for renalert servers, not renegade servers.

People actually bothered to make cheats for renalert? Last time I checked, Final Alert was the map editing program for RA2/YR...

And..

Blazer2. Your claim is pretty much worthless since it contains no valuable information such as which server it was, the name of the host, the name of the cheater, etc...

[A1HITMAN] was on the [BA] toasted server... which is a renguard server..

Hey blaze u pompus ass.. u KNOW I meant final renegade.. sorry I was pissed and just typed away... but you KNOW what I meant and showed that you KNEW by stating final renegade in ur answer... furthermore.. READ THE FUKING POST... I said the [BA] Toaster Oven um... a renguard protected (ya right) server. You just dont want the fking community to know that renguard is a fking mess and it does NOT work correctly 1/2 the time. I will state it again.... really

S L O W so you can read it....

Server: [BA]Toaster Renguard equiped
Host: MrSpeed or who ever the fuk runs that clan
Player cheating: U got me on that one.. he was booted too fast for me to get the name
Server also said that I had connected to a rencrap protected server... so if it says that doesnt that mean rencrap is ON?

LOL Ya keep hiding the truth.. maybe one day rencrap will work correctly... but untill then I will take an honest admin anyday.

Blazer[BA]toaster is not a RG server, despite whatever the MOTD might say.

I was going to mention that. RenGuard rarely runs on their server, it only has that tag in the menu. Besides, that server has been a haven for cheaters ever since the first cheats were released. Before that it was a great server, but now it's just garbage.

Blazer[BA]toaster is not a RG server, despite whatever the MOTD might say.

Our server [WOLSpy] ~ToAsTeR OvEn~ w/RenGrd (209.120.239.79:7000) (which was named [BA] ~=Toasted=~ a few weeks ago) does use renguard faithfully as long as it works. Help me explain how our server fills up for an hour and then all of a sudden out of the blue you hear "you just connected to a renguard protected server" and it kicks about 16 of the 20 playing on it. Has happen many of times. So you all know it does use Renguard

Guys Renguard runs on that server since the day it was out. It is NEVER EVER SHUT off. Thats why no one plays on it but a few good players with RG. Its running right now. it was running last night, it was running last week and it was even running all last month. So if you can please tell me how you know its not running and why its not if it isnt becasue we support Renguard. Its kind of nice sometimes when its fked up cause the server fills up becasue this community just dosnt like your product for many reasons. Mostly stupid reasons!

Yo RENX you can go f*** y***self for your rude comment saying our server is garbage. I just lost all respect for this idiot. Hey Renx tell me what server is yours becase for someone to call someone elses server garbage they must have a full time 24/7 server running right? You need to know your role and shut your hole.

That server used to be my favourite. Then after cheats came out, there were never, ever, any mods around. Tons of games were ruined by cheating. When I saw the RG tag on the server a while ago i decided to give it another try. When i connected, rg wasn't running and there was 2 cheaters with final ren in the game. A week or so later i tried again, no rg and 1 cheater in the game. Maybe I just have bad timing, who knows.

I don't run my own server. But i'm an admin on the n00bsvrs, they run RG without a problem. I'm a mod on the former TWA server, it runs WD's RG SCC without a problem. And I also mod a few other server, some run renguard and some don't. It wouldn't hurt to keep a few more moderators around for the Toaster Oven server.

If you're having trouble with RenGuard(seems to be the problem...) then go to the support channel and try and get help instead of letting cheaters run through your server.

One of our masters was moved to a box with a shitty processor for the month of June because we went over in bandwidth by about \$180 on it. It caused most of the network to be slow to respond

and such. We have since shuffled the servers around and everything has been running much better since then. It's possible that at the time this guy was cheating, our network wasn't telling your server quickly enough that he wasn't on RenGuard and should be kicked.

Hey Renx tell me what server is yours becase for someone to call somone elses server garbage they must have a full time 24/7 server running right? You need to know your role and shut your hole.

Before I posted that, I accessed the RenGuard network to see if there was any [BA]toaster server on RG, and there was none, I just searched again, and the closest thing I can find is a server called " ~ToAsTeR OvEn~ w/RenGrd". So all I am saying is that while [BA]Toaster may advertise that it is on RG, it is not and thus people can cheat. If they have some RG SSC runnung perhaps it is misconfigured or something, please alert the admins to come by the support channel so we can get them fixed up.

Subject: Renguard not stoping final alert....
Posted by [\[A1\]HITMAN](#) on Sat, 03 Jul 2004 22:54:24 GMT

Blazer[BA]toaster is not a RG server, despite whatever the MOTD might say.

If its nto a rengard server... then why the hell do u get the "youve just connected to a rencrap protected server" when u log into it? And why does ti boot people who do not have renguard on? The night in question people were getting kicked for NOT having renguard but this noob was still using final renegade.

This is the typical answer in these forums.. people will not take credit for screw ups. Renguard does not work correctly.. bottom line. Now weather it is a server issue.. or a renguard issue.. or a network issue.. bottom line is it doesnt work correctly 1/2 of the time. Furthermore because of this it gives players a FALSE sence of safty against cheaters..

I await the day it works right 100% of the time... or maybe I should be waiting for the day yall just give up?

Sorry to do this to you Blazer, but..

MrSpeedOur server [WOLSpy] ~ToAsTeR OvEn~ w/RenGrd (209.120.239.79:7000) (which was named [BA] ~=Toasted=~ a few weeks ago)

so they are connected to RenGuard, or at least are now.

This sounds like it would have been a box issue (as Crimson pointed out) or, seeing as how no security system in the world is immune, someone may have found a way around it.

Is there an easy way to know if your server is online with Renguard? If not can I turn it on as easy as trying to shut it off then set renguard ON. Will that help any? I just joined the Toaster OVEN and it didnt say the renguard server connection thingy and as far as we can see its on. It was never shut off.

```
<[BA]MrSpeed> !rginfo  
RenGuard Status: ONLINE. The RenGuard Network has 466 users and 57 servers.  
<[BA]MrSpeed> !set renguard off  
Deactivated module renguard.  
<[BA]MrSpeed> !set renguard on  
Activated module renguard.
```

seams to be working
Player SlaughterMortar joined the game
Host: [SlaughterMortar] You need RenGuard to play on this server. Download it from <http://www.renguard.com>.

[View Forum Message](#) <> [Reply to Message](#)

Only problem about it working half of the time is people dont trust it and if its not working the day they download it they may never try again unless we get every server "Renguard Protected" then they will have to download it.

Our server was full the 4th for most of the day at 20 peeps with RG on.

Jzinsky[A1HITMAN]I await the day it works right 100% of the time... or maybe I should be waiting for the day yall just give up?
