I was just playing on the pitts, and suddenly when the map changed renegade closed and I was like hmm I wonder... then I looked in the Renguard console and it says

[00] Bad/Corrupted file C&C_Volcano.mix has been found in your renegade directory
[00] You have been kicked from the server for cheating.
[00] You have left server The Pits (renmaps.com).
[00] Disconnected from RenGuard network

and I was like what!?

I figure my C&C_volcano must have gotten fuxored some how and I was wondering if there was a place to download it or if someone could e-mail me it. I noticed earlier in the week I couldn't join the pitts when it was on C&C volcano either, it was grayed out.

I did actually. It says

This file does not have a valid download link.

Which led me to beleive they didn't have it up here because it comes with renegade. Anyone else that can help me?

Yea, that's a little weird. Sometimes if you just restart renguard it will work again, other times you need to get the file new.

Instead of downloading it, you could of just deleted it and ran the renegade installation over again(without uninstalling) and it would replace the missing file.

The Pits had some technical difficulties with the RenGuard SSC but now msgtpain nearly has GameBot performing the functions.

At this point, in his limited time, he's able to log into the network and have them show up on his server when you use the player locator on RenGuard.com.
