Ok I downloaded the patch for renegade when it says you have to restart the game so I do that and it says it's updating the game and about halfway through it stops and something comes up saying:

Renegade has caused an error in
PATCHW32.DLL
Renegade will now close. If you continue experiencing problems try restarting your computer.

I tried restarting my computer and the same error comes up. I tried reinstalling Renegade and I still get the same problem. Any help appreciated.

Open C:\WINDOWS\DrWatson.exe

Run the patch again.

It'll report the details of the error.

Copy and paste em here.

Here's what the diagnosis was:

RTPatch Executable performed an invalid memory access.

Module Name: PATCHW32.DLL
Description: RTPatch Executable
Version: 6.03
Product: RTPatch
Manufacturer: Pocket Soft, Inc.

Application Name: Renegade.exe
Description:
Version: 1, 4, 0, 0
Product: Westwood Studios

Manufacturer: Westwood Studios

Invalid memory access. Argh.

I'm having the very same problem with some programs, most notably HTML. I've posted about this on [techsupportforums.com](#) but so far without an answer. I guess you're running windows ME?

I have a few solutions. Download renguard again from the site, which will be the latest version. Uninstall your current renguard then install the executable that you downloaded. That "should" fix the problem.

Alternatively, I have an idea, which probably won't work but it's worth a try. Go to the run box and type in regedit. This is your registry editor. Navigate to HKEY_LOCAL_MACHINE - Software - RenGuard and find "patchversion" on the right. Now, what version are you using right now? Open renguard and see what it says on the top menu bar. If it's 1.03, right click patchversion and click modify. Enter 1.03 and choose ok. Try to patch again. If it still doesn't work, try entering 6.03 (this is the version of patchw32.dll) then try patching again. Either way could work.

But I'm not trying to patch Rengaurd. I'm trying to patch the actual game of Renegade.
