Yea thats the same prob I had...Clear all your textures... (go to the renegade material editor and press the clear all button)And when I use the Renegade material editor I always get this prob...How I add textures:I press the Gmax Material Navigator button and drag the textures to the objects... works fine for me... (ow and ofcourse add a UVW map modifier)[April 28, 2002:

HELP ME TOO, I have had it for 1/2 days, I think it started after I created a multi-material. I can load another file and it works, just not on my screwed and I have spent 7 days of life on bloody map.

If you click on the material "editor" instead of "navigator" then you should see the clear all button. The material navigator crashes gmax for me too, and clicking clear all did not fix the problem for me. Any more suggestions anyone?

or hit the CLEAR ALL button in the Material viewer "M" and it will clear all the unused textures
