Insufficient memory?

How often have you tried? It happens to me sometimes but I just restart and it works.

KrougerWhen ever i run RenGuard it just freezes immedietly, It shows up but the entire thing stays gray.

This is usually a sign that RenGuard isn't able to connect to the RenGuard network. Check to make sure your firewall isn't blocking it. Otherwise I don't know.

Firewall is not blcoking it because it pops up and asks, of course I said yes.

Not memeory, because I restarted my computer tried and it didnt work (and repeated twice).

Here is what it looks like:

I use Windows 98 SE btw

This happens everytime

(note: In the picture I tried to capture the close dialog box, but it didnt show...it said: Renguard 1.03 "[Not Responding]" )

This is definitely your firewall blocking RenGuard.

Try to turn it off, see if that works.

If that works, it's your firewall now allowing renguard properly.

KrougerFirewall is not blocking it because it pops up and asks, of course I said yes.

Not memory, because I restarted my computer tried and it didn't work (and repeated twice).

Here is what it looks like:

I use Windows 98 SE btw

This happens everytime

(note: In the picture I tried to capture the close dialog box, but it didn't show...it said: Renguard 1.03 "[Not Responding]" )
