Hi,

I have a big Problem!

I want to host a Renegade Server on my Server (680Mbit/s)

But if I run the Server executable (RH8 server version) it always says

***Auto starting game. Type 'quit' to abort ***

It always goes on!

I have a SuSE Linux 9.0 Server and I want to host a Ren Server. If anyone can help me or wants to install it with all the tools contact my by E-mail ASAP!!!

If you hurry it will be Online and will never shutdown! A high performance Server with a 680Mbit/s connection!

Please HELP ME!!!

Be sure to set your server to GAMESPY.

WOL is not supported on the Linux FDS!

but i don't have a Gamespy account.

And why is there no WOL for Linux?

Can somebody send me a config file?

But are you sure that there is no support for WOL?

No. The company that created Renegade does no longer exist.

Use the standard configuration included in the Linux FDS.
