well, seeming that the renalert forums are down, due to connection overload (yes lots of people trying to get on there) you cannot access that link, so here is the direct link to get it.

first link is the ful installer like 300+mb or whatever, so you do not need 991->9925 to install it, and for people who already have the other patches, get the second link, its about 120+mb...

here it is!!

[Renegade Alert] Current Version: 0.993 Download at:
<http://www.filefront.com/?filepath=/renalert/RenAlert993.exe> <- Full Installer
<http://www.filefront.com/?filepath=/renalert/RenAlertPatch993.exe> <-Patch Installer

It's not the forum. It's the entire GSI network.

Considered changing hosts?

I have a very reliable ad-free (free of charge) host i know of.

Just finished playing it for an hour or so, everything plays really well, but can naval transports carry vehicles? Because in Shallow Grave, those gems are in the middle of an ocean, and I think the only way to get to them is over the water.

Just wanted to take a second here, and say I really enjoy RenAlert, and to keep up the good work. Oh.. and also wanted to say thanks for breathing life into the Renegade community, I fear it's in it's final days. But, we'll see.

For those of you that don't want to install Renegade all over again to play RenAlert, here is the WOLData.key file you need. . . I have the WOLData.key up on my server now . . . Hope this helps you out, I still haven't been able to play online
<http://www.egmods.com/DownloadFiles/RenAlert/misc/> It's in there. . . Umm . . . again, anyone using my server, if you can please go to my main site by going here
<http://egames.servegame.com> and please click the Google ads (NOT The image) at the bottom, THX! Thank You so much if you do that.

OMG I GAVED YUO ALL MY CD KYE!!! OGM OMG OMGM !!!!!1111one one one one . . .

I have 2 cdkeys, both valid. Also when I ipen the file all I get is
449894427583708060505194098257904839892507159648353315295694472574716968139915
04810374747199565230300194812444039267909789563111 so unless that big number is my
cd-key and I had to enter all of that in when I installed Renegade, you don't have it.

Just to let you all know in advance, I may have to remove the RenAlert .993 patch from my site
Since my server is at my own home, and I can't currently afford a dedicated server such as
something on servermatrix. . . I will have to remove it because otherwise I can't get online to play
this, or anything for that matter, the only times I can post is if I am really lucky, like now. I will ad it
back one once I can afford to get a good server. If you would liek to help me out to get a good
server please go to <http://egames.servegame.com> and click the google ads at the bottom. They
are the text ads, not the image. THANK YOU

Also, who submitted my site to be a file mirror of RenAlert .993 patch? Just wondering is all.

No one, I posted it in the first update thread, that appears on the main page. So Chronojam must
of just took it from there and threw it on the official list.

But it is, yah. You entered a small version of your serial number. The game converted it to this nice big version. People who use your WOLData.key will be using your serial number.

LOL! So there was no point of me uplaodign that for the people who don't want to install Renegade all over again. Ohh well. I don't care that the link to the download is on my site, but I'm goign to have to have him remove it, I am removing the RenAlert .993 patch from my server untill I get a better server, my current one sucks balls. Ohh well, my dad said he would let me get one off of server matrix if I do a couple things . . . Something in my signature has to do with it . . .

Some people here dislike us and our mod, every single thread started for an update is turned into a renalert discussion by ack or his ass lickers...

I won't post any more updates here, moderators aren't making a good job here (thx for your post crimson, but that don't and won't change anything). I think some people should get a ban sometimes for their behavior.

Well, If you want to see updates about Reborn, if you like our work : come here ->

This might be a surprise, but no one cares, especially since this is a Renegade Alert thread.

Plus, we aren't the ones that turn your update threads into Renegade Alert discussions, you and your 'tards are the ones that do that, we just simply post our opinion about the crap you post, and they have to come in there and post about how they think Renegade Alert isn't any better, or how Renegade Alert sucks because they didn't like our opinions, etc.

I don't even particularly like Reborn. I'm just sick of ACK's bullshit, and I think his mod isn't even worth wiping my ass with.

Oh, this might also be worth mentioning: Sir Phoenixxwe just simply post our opinion about the crap you post When I tell ACK that his mod is no better than he thinks Reborn is, I'm simply posting my opinion about the crap he posts.

I haven't played the newest release yet, but that came out only a couple days ago, and I'm leaving tomorrow morning & will be gone until October. (Also, I'm 1000 miles away from my computer and I'm not about to put any crap like RenAlert on my friend's PC.)

I think the vast majority of the comments I've made on these forums were BEFORE the newest release, though, so that "you haven't tried it yet" argument is invalid.

The releases before did suck, but that's why they were released. Isolating issues and hammering the gameplay out into a polished product is exactly why we hold public beta tests.

This is why nothing has gone above the 0.xxx stage yet.

I'll repeat this for RenX.
How can you call it "crap" if you've never even touched RenAlert .993B before?

We've all played Reborn, that's why a lot of us know what we're talking about.
