If you shoot the little lightning bolt sign or the colored bars at the side of the multiplayer obelisk PT, you get bullet holes instead of the shattering glass you get when you shoot other PTs in the same place (or when you shoot the picture of the obelisk).

Is this something others have noticed?

Does anyone know of any other such bugs?

Wow, you must have been bored.

And it's weird, not wierd.

happens to me aswel.. normally when i die and waiting for money to buy a tank i shoot the PT

i think it happens on most PT's

i noticed it ages ago
happens all the time..... :rolleyes:

i like drawing patterns wit bullets u see hehe ^^
