have you ever patched renagde? if not download and install this
ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe

if you still get a version mismacth you must have installed a model you cannot use in multiplayer games

Could be caused by objects.ddb in your data folder....

if you continue to have this problem hit host game and start the game up and renegade will crash and when you start renegade back up it will be ok and you will be able to join that server
