Earlier today i was playing on one of my favorite servers noob stories server 1 because it had renguard mean no cheaters. But this guy was just slaughtering ppl with an apc and an engi's pistol. Here are some ss's as evidence:

1

2

3

4

5

Now this may not mean he is cheating but it VERY suspicious. Wtf is going on ???

That was while BRenBot was crashed. The server wasn't on the RenGuard network and therefore wasn't enforcing it. When I started BRenBot after seeing that it crashed, I kicked that guy with the weird symbols in his name.

One person always joined the server right before the crash, so I banned them. I don't know if it's their name or what, but until Blazer can fix it, I just can't have him in there.
