I dont under stand why you can have Renbot with RG built in, but you cant have BR working with RG. Seems crazy that which ever was made second wasnt made to work with the other application. I thought the whole concept of makin the Renguard ssc would be to make it work with BR, you dont need it for Brenbot so I presumed it was made for servers running BR, maybe im missing somthing here, is it just ment to be used independantly ? without any admin application running.

BR.Net deletes logfiles SSC needs.

I might have an option in the next standalone to read the Archive_* Logfiles from BR.net

Apperently, djlaptop's SSC has a BR.net compatiblity mode too, but I dunno about that.

I have had it for months, but I never tested it.

Find the topic for djlaptop's SSC and see if it works for you. BR.NET does weird things to your logfiles which makes it difficult to use any of the current solutions out there to RenGuard your server.

The RenEvo SSC is currently the closest thing to working. DJ's SSC just freezes, and the BR .Net mode does nothing.
