I heard that the LFDS doesn't work on WOL. Is this true? Is there another way? I want to run a FDS on Linux that can connect to WOL, any way?

So, does anybody have the source code for it? I'm working on my SE here at RIT, and I also live on a floor that has all the "uber geeks" on it. I know we can figure it out if someone wants to help me find the source. anyone know where it is?

When, and what's your AIM or MSN, and do you need any help? I'm a programmer
Welll, actualy I'm a Software Engineer.....

try running one of the programs that emulate the windows shell, and them run the WIN32 FDS

not sure if it will work, but no harm in trying

I've already tried. I got to "work" a bit but it's nothing close to stable.

Blazer0x: If you get this message, note that I am still waiting to help. I've been trying to contact you for a while, and the past few times you have not responded, I understand you are probly buisy, but thats what I need to talk to you about. I want to help you as a major project for my floor,

and I would be willing and able to enlist the help of about 3 more programmers or more if you need it. Please IM me.

BREAKTHROUGH!!!

BLAZER, CONTACT ME ASAP!! I have a friend that created a script that scans tcp traffic and routes it so you can intercept and figure out whats going on. He just needs to know what the port and server name is, but he's trying to figure that out now. He's an EXPERT at perl. PLZ RSVP!
