Hi there I was just playing on the Fanmaps (i think)Crazy CTF Vehicles server and they did not have Renguard running but it seems they had a bot that would identify players who were connected to the renguard server. I would like to know if this is a public release or something that they would like to keep secret. I run a small clan server and not everyone likes to run renguard. I however would like to be able to verify that I do not cheat cause once you reach a certain level of ability, no can possibly believe that one does not cheat. Anyways anyone who knows anything about this could you let me in on this. P.S. thank you to all of you who provide support in these forums for us not in the know server admins. Your tutorials and advice have helped me out tons, Thanx [GEE]JJkuby <http://www.gee-clan.com>

Its an IRC Script (Bot)  
Sourcefile: <http://www.fanmaps.net/brenbot/snipesimo/renguard.mrc>  
You need to edit this script a bit so it will work with your bot and stuff.

This doesnt proof they are not cheating.  
This only proofs they are running a RenGuard client.  
It does NOT proof they are using the RenGuard client on the pc they use to join the server with.

This however does not work with ACTUAL RenGuard protected servers, since RG can verify wether people are really in the game or just running it from another location.

Do yourself and the WHOLE Renegade Community a favour:

Run RENGUARD on your Server!
