Okay, remember all those times where you were like: "OMG! That Guy Has to be using a aimbot! Oh, wait, this is a RG protected server, silly me!". Well, I found a AimBot Program when testing mods. Here is how it works and my suggestions on how to stop it.

- Notice how when you point at a enemy's building the crosshairs turn green, but when you point them at enemy personall it turns red.

- A aimbot is a program, not a objects.ddb or W3D File

A aimbot scans a certain pixel width in the monitor's display. It must be set to pick-up when a certain pixel or pixels turn red. A aimbot does not shoot at buildings or friendlies because it is green, white, or yellow. This is how a aimbot works.

My suggestion is this, make a crosshair with two different shades of red. This confuses the aimbot. Such as the Srean Warthog one. While I have not tested on anything more than that practice dummies, I think this should be suffiecent for now.

If you must know how I found this out, I am a re-formed hack user. I got this idea from when I used a aimbot. I now use RG, so don't worry. Of course, if you don't believe me then ban me.

Aimbot = something that aims and shoots

You are clearly describing a clickbot, where you aim the cross-hair and it clicks for your lazy self.

RenGuard doesn't stop these and never will. They suck to use, and are easy to detect manually. Besides, they don't give any form of advantage to the user.

Doesn't a clickbot also require coloured skins for enemy characters? E.G. an enemy sniper that's all red. Surely those skins could be blocked by Renguard?

No, all a clickbot requires is a change in the reticle so it knows when to click on an enemy.

A pure mode server would block colored heads, but it's usually not even worth it. I haven't heard of anyone actually having an advantage with a clickbot.

Actually, when I did cheat, these were great. I just point the crosshair and got a shot off 75% of the time, killing them.

Clickbots are for cheaters / "hackers" that are at the bottom of the porta-potty and can't "find" a real cheat. They aren't even valuable. The only time you can really hit your oppenet is when they jump from behind a wall.

Clickbot= Turd

Cheaters That Use Clickbots= Diarhea
