Hello.

I use Win2k and i have the known problems with Renguard ("Buffer Overrun").
I found, I write the following *.BAT file to help myself:

```
echo off
cls
goto start

:start
c:\games\Renegade\game.exe +connect 81.92.166.90:4300 +NetPlayerName l0calh0st
if "%ERRORLEVEL%" == "0" (
goto :end
)
goto :start

:end
pause
```

This will start Renguard until it has no Error.
But this way is just to connect to the "Renegade Community Server" with the Nickname L0calh0st.

So i wrote a programm in C++, what is writing this *.BAT file and executing it.
Renguard starts properly, but the Server sais: "You need Renguard to play on this server!".

What can i do to prevent that??
