Bug Name: Download "mirror" Bug

Bug Description: It won't let you download Core Patch 1. (It stops when trying to download mirror.txt (which is the first file)).

PC Details:

- The pc has been reinstalled two days ago, so it's a clean Windows XP SP1 setup.
- No firewalls or antivirus software have been installed.
- The default windows firewall is disabled.
- Access to <http://www.blackhand-studios.org> with a browser is possible.

Bug Status: I have discussed with mac and Jonwil already, but they don't know how to fix it yet.

Only post below if you got more info or the same problem.

just put a mirror.txt (it can be left blank) into your Renegade dir.
Now start the Download.exe and it will skip this file at the donwlaod process.

I already had mirror.txt in my directory. (empty file)
I tried deleting it and tried it again, but that also didn't work.

Yeah, I'm Getting that same error. I've tried mirror.txt as an empty file too and it still didn't work.

I'm Running:
WinXp SP1, and All patches going with it (bar SP2)
And a Wireless Network.

Still not having much success to get any clue why this is.

As far as I can tell, this is a network problem. I gave Rex a Sniffer, and he sniffed his network connection while the downloader was trying to connect.

Turns out, it never made a connection!

This makes me pretty certain, that this is a firewall issue, or something else blocking network connection, as "mirror.txt" is the very first network connection.

Please check your firewall settings.
