I get this error.

What do I need to do to fix this? Sorry if this has been posted already, but I couldn't find it. Also, does it try to install CP1 everytime I start Renguard normally, or is that only because of this error?

Send me your scripts2.dll ..

We do not know this file, and this is causing problems .. the pre check should prevent that kind of error

Check your pms Mac, it should be in there. Also I downloaded scripts.193 just for the hell of it to see if it worked then, but now I can't even get to the screen where it starts to install. It downloads the file, but then doesn't work. It says 416 Error Requested Range Not Satisfiable or something like that. Then switches to this:

I try to install it again and it happens each time. What's going wrong?
