Thats an socket error of the internet connection you have.  
The only thing that will fix it is a pc-reboot.  
I have had this several times with brenbot when the pc didnt reboot for over a week. A reboot was  
the only thing that fixed it.

Also:

```
WARNING: No WOL or GSA Gameport found in server.ini! Bailing out of gamespy_pla
ers!
```

Set a fixed port in server.ini at:  
Port=4040

The default port for gamespy and alike is 4848, but this can be anything you want for as long as the ports are not already in use and your firewall is not blocking them. The ports mentioned are UDP ports.

Atleast one error gone lol..

Now all i get is:

```
C:\Westwood\BRenBot1>brenbot
BRenBot 1.36 RC3 MSWin32.

Didnt help  
port 11004 is not active.  
Simulair ports: 1044 -> Close\_Wait  
But i dont think thats the port we are looking for right ?  
If not.. It didnt work  
Thanks thought..  
Regards,  
LegendLady.

AlienWorkShop<http://www.renforums.com/viewtopic.php?t=12796>  
your little "help reply" didn't work.
