Hey, Just installed the Core Patch 1, but with a problem.
I downloaded it, extracted it and finally ran it.
The Installation began, the maps such as city, walls, etc and always2 was copied, but, then appeared the language.exe command prompt window.
After doing all of its crap'o'latta it gets round to renaming scriptsx.dll to scripts.dll, then it appears with an error 17?
So I thought, okay, lets see if renegade still works, but now when ever I click Westwood Online in Multiplayer, it just crashes to desktop.

Here is a screenshot below, Any Help?
Cheers,

Andy

Remove strings.tdb from %SystemDrive%\Westwood\Renegade\Data perhaps? :rolleyes:

there isn't one in there.
what else?

check if these files are present:

scripts.dll
scripts2.dll
bhs.dll

data:

always.dbs

If always.dbs is missing, get a non-cp1 version here:
http://download.renguard.com/always_dbs.zip

all present, theres even a scriptsx.dll

I have even tried the non-cp1 always2.dbs and still nothing.

Next idea?

Doesn't sound like a CP1 problem then.. more like a problem with renegade. Not sure. Either try to reinstall renegade or CP1, maybe that helps. Sorry.

scripts.dll should be about 500kb, scripts2.dll over 2mb

scripts.dll = 561kb
scripts2.dll = 1.99mb
normal?
but this did happen when I installed CP1, no doubt about it.
Guess ill have to get my ren cd's back from my m8 then.
Cheers anyways,
but look into this for future installations.

Andy.

yea, CP1 BETA worked fine for me also,
Just this CP1 full version has buggered it all up.

exactly same for me, renegade crashes some times since i installed cp1, worked nice with the beta, same error.. same files...

anyone got a clue?

greetz,
