Ok i heard after installing core patch one, you are ment to get new death sounds, EVA speeches and the emotions when saying a command.

I don't get any of these, any ideas to what could be wrong?

Also i was playing in server last night and in the hand i still fell through when i spawned. Does this fix only work on a core patched server?

Do you get emoticons when doing radio commands?

The other features are server side - be sure you play on a CP1 enabled server.

If you do not see emoticons (client side feature) check if you have a scripts.dll, scripts2.dll and bhs.dll

Hey one more thing, during installation, when that dos prompt box comes up, at the end of it, it says
scripts2.dll is in the wrong folder, moving it to the right folder now,
error 17
