Well I installed CP1.1 and now the server seems to be crashing very fequently. Not sure what the problem is but really get annoying since this is another thing on the pile of "What is going wrong right now"

Any clue where should I start to look or just re-install...?

Turned out that everytime the AGT shot at someone the server would crash.

I replaced the server2.ini with a stock file and the problem stopped. I must have messed something up. Not sure why that would happen but the SSAOW is kinda odd like that.
