So, i accidently clicked on renguard when it was coming up (biggest mistake i ever made) and it dissapeared and inspite of my best efforts to revive it, it refused to come back. So i did what any true renegade would do, removed it. when i reinstalled it, everything went as planned. then the problems came. it reinstalled CP1. then when i tried to load ren it said "cannot download reneguard.dll" or something to that affect. Renguard owned me. Help please.

Download this and put it into your Renegade main folder.
