I don't know... I got a:

Athlon XP 3200+ (clocked low at 2.1 ghz because I don't like the thought of my computer running at oven temperature.)
1 gig of DDR 400 mhz ram
ATI Radeon 9800 pro 128 mb

With this, I get a steady 60 FPS with everything on highest. Anisotropic filtering, 16x antialysing, etc. You make the comparison...

Subject: Re: CS:S and my computer.

z310

Mine:
 1 GHz Processor
 128mb RAM
 DirectX 7 compatable graphics card
 Windows 2000
 Mouse
 Keyboard

____

You think it will run properly, also the gpx card is intergraded till I get more money. (Note: I can

overclock the Processor)

probably not at all.

Windows XP Professional 5.1.2600
Intel Pentium 4 CPU 2.80GHz (average of 115 Degrees Farenheit)
RADEON 9200 SE (128 mb)
1 gig of ddr 333 ram

I am nowhere near rich, yet I have that, doesn't cost much a mere 500$ for it all, found inthe right
places The processor I found being 170 instead of 300 helped

Subject: Your Computer.

Z3 I would definately look into getting a video card, ANY video card. I doubt you will get a very good experience from that set up. An integrated video card is the absolute bottom of the barrell. If I were you I would make myself a small budget, even 60$. Buy yourself the best card you can. If you can afford yourself maybe a Geforce4mx or any other card that is by far a budget card but still better than integrated.

http://www.newegg.com/app/ViewProductDesc.asp?description=14-128-177&depa=0

Theres a GeforceFX budget card for 58$ on Newegg.com. Newegg's a good site, I bought a new fan for my GF4TI when the fan died. Came right and prompt.

I don't know much about the card and I am guessing its something like a gimped version of the FX, much like the GeForce4MX's were super gimped GeForce4TI's. Atleast with that card though I'd imagine you could at least play. The main MENU will prolly not even run on integrated. ;P
Those who play HL2 know what I'm talkin' 'bout.

View Forum Message <> Reply to Message

My point is that for $20 more you can get a card that's like 50 times better than the FX5200. Even the FX5200 can be worse than some integrated cards.

Computer 1

2.66 Ghz P4
512 MB RAM
80 GIG HDD
Nivida 5200

Runs REALLY REALLY GOOD everything is shinny.

COmputer 2
2.66 Ghz P4
512 MB RAM
120 GIG HDD
Nividia Mx440 << SUX0rs

It runs good i don't get HUGE lag and shit, but even when i put it on detail to highst settings it
SUCKS no were near my other computers, the guns look good, but level graphics blow, this is the
one i've been owning you all with in renevo server

Mine was built by me, and funded by me and my brother.

i duno everysingle thingy, but here are the basics.

2600+ AMD Athlon @ 2.31Ghz
768Mb RAM
9600XT 256Mb Sapphire Atlantis
Realtek AC97 Audio
200Gb SATA HDD

we bought that for $860AUD (Australian dollar) without keyboard/mouse/monitor a then there
were things that cose more like DVD burner, and stuff.

This is our current HDD space.
 [C:The Shire] 6.39/19.52 GB [D:Numenor] 2.65/55.00 GB [E:Arda] 7.17/186.31 GB

(Yeah, i like lord of the rings books, so what?)
