Well, I used FireFox and my site worked just fine, and then I Used Internet Exploder and I got an error saying that there was an invalid character or something, and then the google ads did not show up. I was just wondering if anyone else had this problem with internet exploder when on my site. I tried it on 2 other computers in my house and it worked fine, it may be just my computer, or maybe others, I don't know. I jsut want to know if anyone else is having this problem?

<http://www.egmods.com> Thanks for your help

You need to download F-Prot antivirus to clean the spyware off your system. It has to be done in DOS mode with a boot disk so it will be quite an ordeal. Blazer and I went through HELL with that thing but now we run F-Prot real-time protector and now spyware can't get on here.

<http://www.free-av.com> is also a good freeware Anti-Virus, not sure if it also protects you against Spyware... I don't have any, but maybe my PC is too old for all the viruses

why does spyware infect IE? :rolleyes:

who uses IE nowadays anyway? :rolleyes:

In a related story, we all know that at least 90% of any given population is stupid.

IE is a good browser if you know how to use it. I haven't had any virii or spyware on my PC in ages (years?) and I still use IE a lot.

And yes, I use Firefox and Opera too, they're not any worse.

buxton4I only really use it on the lottery website because it won't let me use firefox.

In that instance, me.

Yep, only time I ever use IE is if I come across a page that uses Java or Flash or something and Firefox is somehow incompatible with it (i.e. Server stats dropdown for Pits forums) or if I'm trying to stream some WMV or WMA files that need to download first in firefox but on IE it will stream instantly (i.e. Ebaumsworld)

Heres that start of your other problem which you may want to fix with your site:

<http://validator.w3.org/check?uri=http%3A%2F%2Fwww.egmods.com%2F>

Theres WAY to many websites that aren't up to standards.
