Hi there, I didnt find it, so I´m asking
Is there any known problem with CP1 ?

Sometimes (also after PC-reboot) i´m logging into Renegade, choose a Game and its loading.
Then when i am supposed to get into the game i am back at my Desktop. Renegade completly
disapears and only Renguard is running. I downloaded the scripts.dll but its not working better
now. Always at those crashes I falling about 500 places in the ladder. The weird thing is, that this
crash is not always, but nearly everytime i tried it more than once.
And it also crashes after a reboot and a Router-Reset.
Oh, and i tried two different Firewalls. Outpost and Zonealarm...crash happens on both

It cant be a prob with my PC i guess. I have :
ASUS P4533S
Intel P4 2,8 MHz
256 MB DDR RAM 2700
Ge-Force 3 Titanium with 128 MB
900 MB virtuell RAM (because of DOOM3,lol)

Does anybody else has this Prob or does anyone know a solution ? (Dont tell me to stop playing
Renegade,lol)

Merry Xmas and great Holidays to ya all

U should get some more ram, since that is what does it mostly for Renegade@loading.
Maybe a Format when u have some time.
And rebooting might be a heat issue.

Crashing to Renegade is nothing special, Unless ure running 640x320
ore play from time to time Renegade will crash sometimes :rolleyes:

Thanks for your fast answer

I guess I will get me some more ram and (maybe) a newer Graphiccard.
It can´t be a heat-prob cause temp is at 39 degrees Celsius while I´m playing and 2 weeks ago
I got a new HDD and everything new installed.
256 MB Ram isn´t enough anyway

Merry Xmas everyone
