Anything I try to do at <http://dynamic3.gamespy.com/~renalert/>

It says "This site is defaced!!!" and "NeverEverNoSanity WebWorm generation 11."

There's a worm thing exploiting the "new" vulnerabilities found in the PHP, spreading like a wildfire. Renalert wasn't updated.

IF \*you\* are using PHP, make sure your own sites are safe.

<http://dynamic5.gamespy.com/~ra2sw/>

Seems to be attacking all the gamespy servers...

<http://trielite.afraid.org/glydeblog>

Read that, it has some information on this worm. I seriously mean it. Hanging around the PHPBB site really helps sometimes.

BTW: The story name is Requesting Back-up

Ren Alert uses IPB, not phpBB Glyde. So it's probably not a phpBB worm.

IPB is based on PHPBB.

My PHP version is recent enough that we weren't impacted with this on here or any of my other sites.
