try clicking "advanced game listing" and when it tries to connect click cancel and then try again. Usually works for me. Or use Lame...er...Gamespy.

[RoCTwix]search for "HOSTS" and delete them. Then restart and connect.

That doesn't make sense to me...

Twix is referring to the "hosts" file. The file has no extension.

The hosts file in C:\ or C:\Windows..

And for the love of god put some effort into the grammar (spelling) of your posts.

hello... cant people just keep to the topic titles like people are having problems here and all you peeps are insulting each other. if you got a problem with some one post it else where.

Now, what are we supposed to do? delete the "HOSTS" files under what directory

Is what it freezes on...

Is the aftermath...

Now that we have some evidence, can some one tell us exactly what to do?

Instead of just saying "oh go ahead, just delete HOSTS files". I mean, wtf like what hosts files. Where? How!?

Question nr1: do you know how to use explorer?

Question nr2: Do you know how to delete files using explorer

If both are answered with an yes, you have to read pass the spam, you will notice you have to search in the windows directory.

Although I'm not sure if it will work, but good luck.

if it doesn't work

Question nr 3: Do you have a firewall?

k..
someones messing around just 10 mins ago i could login, and i saw 3 players in one server Over all the servers, now its all down.
And dediz0r keeps restarting..
Failed to login, retrying
its down now

Something is messed with WOL.

Sometimes when I refresh, which takes forever may I add, I only see servers down to the letter m or f (Host Name).

Also when I try to join a game I get a join error.

Something is messed up.

Make a new topic for this crap about WOL being down. Its not the reason why me or some other people cannot log in!

I attempted to login while WOL was up and running, now this crap about it being down has got NOTHING to do with it so please, many people are refering to this topic for help while every 1 else thinks they know it all by saying WOL is down. It probably is down but thats not why I couldnt login a few weeks ago, trying daily to get on.

If you wanna go talk about WOL being down, do it else where.

If you need to update your Game to the latest version, download the update from westwood official FTP, its faster than using the Game to do it and you can save it on your harddrive so in the future if you need to reinstall Renegade for whatever reason, you dont need to re-download it again

<ftp://ftp.westwood.com/pub/renegade/updates/>
