I used to be an avid renegade player, and i never had problems running it before. But once i took a 3-4 month break from the game, it never worked again. I've reinstalled it atleast twice, both times installing rengaurd and all of the patches for renegade. Ok, maybe it would help if i stated my problem. Renegade won't load up. Or atleast Multiplayer won't. Everything will run just fine up until after the 'Checking Bandwith' (i'm not sure if that's exactly what it says) box. The box, i think it says 'Joining Server', will then appear and everything gets stuck i've left it there, for maybe 30 minutes, waiting for it to load and it simply won't.I'm not sure what the problem could be, help please?
