I finally got myself to reinstall this game, but when I try to install Renguard it says "C:\Westwood\Renegade\ . Renguard must be installed to you Renegade directory!" So It wont let me install, any known reasons, ways to get around, etc?

You need to install it to your rendir.

If the installer fails, get the files game.exe and renguard.dll manually from someone. Rename your old game.exe to game2.exe
