Kekekekeke.

I just got it today, but I'll only be able to use it tomorrow.

So... Here's my new rig:

Air cooled A-TOP XBlade case (blue)

Pentium 4 HT processor 3.2GHz overclocked to 4.0GHz
(cooled by a Zalman heatsink)

Kingston DDR PC333 512MB RAM (X2)

Linksys 100MB Ethernet card

ECS 865-A (not quite sure) Motherboard

ATI (Connect3D) RADEON X800 XT 256MB AGP VIDEO CARD.

Western Digital 120GB HDD (7200)

Maxtor 40GB HDD (7200)

I've put that money in my box only to get the best gaming experience in Half-Life 2... Talk about a waste of money eh?

Your turn!

I don't get these threads....what's the point? post your rig and see who's got the "bigger dick"? I don't know about anyone else, but I couldn't care less about anybody's PC.. unless they're needing tech support or something.. bah.

plus an x800 is a waste of money... no need for anything better than a 9800 right now. what are you going to do, get your computer to handle a hundred trillion calculations a second while playing doom3 and half life 2 and watching two DVDs?

Heheh, give him a break. Owning a nice PC that costed a small fortune is a matter of joy. I should know

Here's mine:

<http://img154.exs.cx/my.php?loc=img154&image=pc0011xv.jpg>

Athlon XP 3000+
Asus A7N8X-X

BeQuiet 430W PSU, 2 blue-led fans.
1024Mb Kingston DDR400
Soundblaster Live! 5.1
Gainward 6800 GT Golden Sample (beats Ultras)
Dualview, main monitor at 1600*1200@75Hz.
Thermaltake XaserIII series case.

Btw Aprime, you either say DDR333 or PC 2700, not PC333.

MHZ isn't generally the only thing that shows how good a CPU is. The Athlon 64's are around 2.4ghz but they blow away a lot of CPUs out there.

[View Forum Message](#) <> [Reply to Message](#)

Yeah, AMD processors work at slower speed (= less clock cycles, Mhz), but they do a lot more work per each clock cycle. That's why an AMD Athlon 3000+ can compete with a 3Ghz Pentium, even though Athlon only runs at a little over 2Ghz.

Intel is following AMD's footsteps in this though. In close future, the amount of Mhz isn't even shown in the processor name, they just make different brands to reflect the CPU's general capabilities. The amount of megahertz won't mean very much anymore.

You paid \$700 just for a video card? Scary.

Mine:

AMD Athlon64 3000+
3GB RAM (Yes 3 Gigs of RAM!)
2 73GB Ultra320 SCSI hard disks (simply nothing faster)
BFG GeForce 6600 GT OGC (overclocked)
Antec case - 'nuff said
SB Live! X-Gamer 5.1
Creative Inspire 5.1 surround speaker system using fiber optic input
Sony CPDG521P 21" Monitor w/dual inputs
Sun Microsystems 18" TFT display (actually not connected ATM)

I don't have a \$700 video card, but my hard drives and perhaps even my RAM cannot be beaten

Subject: Bow down. (rig competition)
Posted by [Falconxi](#) on Wed, 05 Jan 2005 09:44:14 GMT
[View Forum Message](#) <> [Reply to Message](#)

Over a year old and good enough for me, and work.

Asus A7N8X-E Deluxe
AMD Athlon XP 2800+ Barton (OC'ed to 3200+ when needed)
1gig Samsung PC3200
ATI Radeon 9700 Pro
Hitachi 250GB SATA HDD
480W near silent Power Supply

All enclosed in a heavily modified \$20 screwless case.

Attached to a 17" KDS CRT monitor

I'm thinking this time next year I'll be due for an upgrade. I can't justify spending a shit load on a new computer after just a year.

My system owns all. Last time I read a review in some magazine about new Nvidia Geforce cards using SLI technology. The funny thing was they also talked about the history if that technology, and how 3FX voodoo was the first to use this kind of technology.

A really big part of the complete review was just to explain what the hell the company 3FX was and what happened to them. So I think My Pc is kind of special with a real 3FX Voodoo 5500 PCI.

Not to mention my windows is installed on a 1GB hard disk I stole from an old 486, because my 20 GB HD has become unreliable. for the Rest it's a p3 450 with 320 mbRam.

I doubt that, Since the AMD 64 is x86 backwards compatible
However Drivers,OS are just starting up for the 64 Hype.
Meaning running a 64bit OS might still be buggy.
And running Renegade on a 64bit os doubt it will work.
But the hardware side shouldnt be a problem.

2 KB RAM
25 Mhz Intel
20 MB HD
50 Watt power supply
ATI Radeon X800 256MB
5" Monitor

since the 50 watt power supply isnt usually enough to power this bad boy, I have it hooked up to a gas generator in my room to give it a little more juice.

Runs Half Life 2 and Doom3 on max detail no problem.

Keyboard:

PropertyValue

Description Logitech HID-Compliant Keyboard

Pointing Device:

PropertyValue

Manufacturer Logitech

Name HID-compliant Cordless Mouse

Sound Card:

PropertyValue

Manufacturer Creative Technology Ltd.

Description Creative AudioPCI (ES1371,ES1373) (WDM)

Device ID PCI\VEN_1274&DEV_1371&SUBSYS_80011274&REV_07\4&22775069&0&3870

Video Card:

PropertyValue

Adapter Compatibility ATI Technologies Inc.

Adapter RAM 268435456

Description RADEON X800 Series

Installed Display Drivers ati2dvag.dll

Driver Version 6.14.10.6483

Driver Date 9/29/2004 12:22:22 AM

Video Mode Description 1280 x 1024 x 4294967296 colors

Adapter Compatibility ATI Technologies Inc.

Adapter RAM 268435456

Description RADEON X800 Series Secondary

Installed Display Drivers ati2dvag.dll

Driver Version 6.14.10.6483

Driver Date 9/29/2004 12:22:22 AM

Video Mode Description

DirectX Installation:

PropertyValue

Version 6.03.01.0146

Modem:

Not if you keep bumping it.

Besides, I won. :twisted:

Now lets have a contest; See who has the fastest CPU in terms of GHz (MHz) and NOT performance

I win before you even start.

(If you want a chance at winning, you MUST supply a screenshot of CPUZ showing your CPU information)

Any reason for that? It doesn't hold at 99% CPU usage, it spikes, going from 2% to 99% in less than three seconds.
