How can I make cloudyserv say everything what is being shown in the fds window? Cause I installed the ssaow, but dont see the kill messages etc.

Also (2nd) question: How can I have the ssaow and donate enabled at the same time? I installed the ssaow but now I cannot !donate anymore (btw I do have bhs.dll in the server folder, but I had to overwrite the script.dll and script2.dll, there's the problem I guess), does anydoes have a link to the file where it has both?

thanks

First set DDE=1 in the settings.
Second tell your bot to perform "/load -rs aow.cs" on startup.

If you have the latest CS and SSAOW and donate enabled in the settings for CS it should allow donate. I have not heard of any problems with those features.

Sorry, I misled you. What I said is true however the version of CS required to do that is still in the Beta stage and has not been publicly released. You will have to check with CloudyOne or Adad to find out when the next version is being released.
