Ok i have this thing called cedega which lets me play windows games online and actually install them, well i was installing C&C generals and when it told me to input disk 2 it wouldnt let me unmount it "drive is busy" which sucks, and if possible can any one find me a way to get my dvd drive no have to mounted and un mounted to eject it and use it? I cant play any two disk game due to this problem.

Maybe a process froze while using the Cd-rom drive. Wich keeps the drive locked. My guess is try finding out what processes are running and kill it.

I don't know what Distribution you use, but it should have at least some system monitor program. Try to kill the process with that.

If you can't find a program like that. Start a terminal. Enter the command `ps -aux`. This will give you the complete list of running processes. Now you can use the `kill` or `killall` command to stop the process.

Edit: woops, just read it happens while you are using the install program. In that case, I'm sorry I can't help you. But you can't use a drive without mounting it. The best idea, would be to get the iso of one cd on your HD, and mount the iso file.

In FC3 I always had a problem with this but that could be because the CDdrive was outdated.
