I have tried to install renguard a few times now and every time i do, my mouse senisitivity goes crazy. For example, if i were playing renegade and my anti-virus tuned on, my mouse would go all crazy, well its the same thing with renguard whenever it is running, so i've just decided not to use it. Offcourse now they have those servers where n00bs can !forcerg on anyone who is good so now i'm forced to use rg and some of the servers. So if anyone can help me out on changing something to deal with this problem.....i've tried changing the sensity in renegade and that didn't help.

Here's the mouse im

using....<http://www.logitech.com/index.cfm/products/details/CA/EN,CRID=2150,CONTENTID=5003>

and im running windows xp sp2

if ya need anymore info just ask..

and for those of you who don't know...this is jadams

What an ugly mouse!

Disable the mouse-acceleration.

Make no cross at "stop acceleration during game" .
