Cant seam to get our server to work with the latest core patch. I try to load and it pops up and then its gone never to be seen again. So I decided to uninstall the server and the patch and reinstall new fds and tried it and it worked and showed up on GSA without the patch. Then I installed the 1.03 and WHAM!!!!! it pops up and then it blinks off and shuts down by itself. We are on a new box using Windows server 2003. Its always worked before but will not with this new version.

HELP!!!!

I guess I must be the only one with this problem. Kind of odd seeing all the patches and renbots always worked before and the serrver works with old patch. I guess we will have to stick with the older one till its worled out.

Thanks

Well next I have uninstalled the server again and then decided to host it on WOL and boom it worked. I think you all may have a problem with the latest cp working on GSA. It pops up and blinks off in less then a second.
