<http://www.modchip.com/ps2/slidecard.htm>

Does anyone have this? And this site says you dont have to have an internal modification, but other sites say "Mod Chip Required" or "A screwdriver to open the case, a 5 minute installation"

EDIT: Oh and no way am i going to put in a mod chip, 18 wires!

A. Site seems to be down. I can't connect.

B. I've seen a modchip that used one USB port of the PS2, but I don't know if it works or not.

Pay somebody to do it for you, I used to charge to install chips, and know several people that do.

How much is it?

Its a one time thing anyway.

Well one place i saw will do the "Labor" for \$80, then \$60 for the actual chip, then shipping both ways.

Adds up.

My cousin has it and yes it works. I have never got around to buying it but will eventually it would save me so much money to just get gamefly and burn copies.

Yes I have this and it works without a modchip so no violating your warranty.

The only problem with it is that if your cd swap magic is somewhat broken then you can't used AR cheats on it.

To me it's a messege, clearly saying: STOP CHEATING lmao.

Actually I'm not 100% sure if you can't use cheats with this because the cd's have been updated since the last time I bought them from the same website
