Hello can you help me? Ich have many problems to config my server.

At this time i have config my server so:

GameSpy with see Players and Renstat (Ladder System)

i want so:

WOL + GameSpy with see Players and Renstat (Ladder System)

can you help me?

If i start the server on WOL and play a few maps, renstats will crash and say: "Runtime Error '13', Type Mismatch". The Problem is the server writes in the resultatXX.txt "Rank" "-" down. And so the Ladder System crashes. Have you any solutions?

pls answer, and thx for all answers

One of the results*.txt files in the RenegadeFDS\Server\ directory are fuxxed.
Deleteting the results files that contain errors is the only way to fix it :/
