Ok ladies & gentlemen, boys & girls. Here is a small clip from an exhibition held here in Scotsdale AZ late last year about Virtual Reality and Reality in unison. Everything you see has no physical mass, only the table, a few objects and host. So with that said enjoy the next 5 minutes of what's to come in the name of video gaming.

The Future 10.8mb Right click, download

Is this insane or what?

It's insane. You can't really follow the guy because of his English, but what that technology can do is just plain amazing.

OMFG thats amazing.

One thing though, did the camera have a special lense? Or did they actual project those images? (doubtful)

It's just software that renders 3D objects in movement directly into a live video feed.

Nothing to be amazed by, seriously.

Cool technology, although still very expensive to be marketed at the consumer level.

I am sure we will see a lot of R&D on it, given the countless applications it can be used for.

Some developments made on the gaming front.

"A page referred you to a direct media link on our site. Please go back and request the author link to the page which the media file was on, rather than media file itself."

Works if you cut and paste the link though. Facinating demonstration. The CGI objects actually interact with the real objects.
