I'm looking for someone experienced perl to help me with brenbot's new plugin system.

I got most of it done, and I need some feedback on its usability.. I have written a few usefull sample plugins, but need some work on documentation and usability..

If you know perl (it's similiar to php but not the same) please contact me.. you'll need a brenbot installation and a FDS installation and lots of ideas of plugins.. something you wanna do.
