Can someone guide me to a good cd back up software so that i could use to to copy a cd on to my hard drive, other that alcohol 100 something % becuz it give me disk read errors, the reason why i want this is to play YR(yuri's revenge) with out the disk and back up some of my cds which look like they wont last into the year. Thanks. A YR no cd patch would also help to if u could find one.

BTW i do not what ACK to post in this topic.

<http://www.justfuckinggoogleit.com>

damn

gamedrive works nicely  
also getting programs past thier 30 day trial would need you to purchase it  
or crack it which is bad!

Google is your friend you can find almost anything on it if you use that brain you was given

lol, alcohol 120% gives disk read errors but if u enable fast skip error blocks the file it makes is usually good enuf 2 start the game anyway

and 2 extend stuff past its 30 day trial u either buy it or download a crack for it

DJMO on some programs made by retards, if you uninstall it then reisntall it it'll work again.

more and more programs wont allow this anymore  
theres lways a file or a registry somewhere lettting this program know when the trial was started..  
can just delete it

Or you can just make a backup of your reg - uninstall after using the program, clean up any files,  
import your reg file.

run - regedit - files - export to a safe place. Then when you are done just import. There are better  
ways though if you dont like touching the reg. there are always risks.

works for me.

Programs by macromedia for example detect the clock being set back and block you from using th program until you set it back to it's original date.
