I have a total of three servers running one is on its own hard drive and has no problems, but the other two are on the same drive but different folders. I can start up one of these and it works fine, but as soon as I start up the other its gamelog is permanently off no matter what I do. pls help if you can. Yes I have quadruple checked all of my settings all the ports are different between servers. I have even went to the extreme of complete reinstall. Yes gamelog is enabled in both server2.ini files but only one of them will work. any suggestions would be appreciated. If you need more info pls ask
