Renguard recently stopped working, so I tried to unistall it. It loads the installer, i choose "remove" then it freezes.

I also tried this with add\remove programs

I even uninstalled RENEGADE completely, and renguard still wont uninstall

any help would be appreciated

Mahalo, Sanjay

i have completely unistalled renegade, i want to unistall renguard, to start over fresh. Thus deleting those "exe" files will do nothing since they are no longer there.

I really need help on this one, i dont know how much longer i can survive without renegade.

thanks guys

if you deleted renegade just delete the renegade folder to get rid of renguard and left over renegade files

Since renguard freezes up at unistallation, i need to remove it completely to re-instal it. I have already wiped out the whole C:\Westwood\renegade folder. But renguard still reamains.

It wont let me reinstll it beacause it is already installed, even after manually deleting the renguard files, renguard is still there

do u guys get it now?
maybe i need to delete some registry keys

HKEY_LOCAL_MACHINE\SOFTWARE\Blackhand Studios\RenGuard

Try deleting that registry key. On my machine I only have RenGuard in \Blackhand Studios\, so if such is the case for you as well, you might as well delete that key as well.

Edit:

Oh, there's also this key which you should probably delete as well:
HKEY_LOCAL_MACHINE\SOFTWARE\RenGuard

if you have deleted the entire renegade folder then renguard is no more..
the only reason why it shows in the start menu / add/remove programs is becuase you never used the uninstall feature so some stuff like registry settings will still remain
