Is possible to make a server that's regulated by a different bot than BRenBot half RenGuard protected?

If so, how?

Thanks

Yes, it's possible, but you'll have to make it yourself. I'm sure mac can provide you with some info on how to communicate with the ServServ.

Great!

Then now my question turns to, is there a certain language that it HAS to be written in?

And are there any official resources that could be used to accomplish this?

It can be written in every language...

It just has be able to read the gamelog from the server and
to communicate with the server via udp.

Could I please get an official answer w/ any official details on how I can do this? (either via. in this
thread or PM)

Much appriciated.

majikentIs possible to make a server that's regulated by a different bot than BRenBot half
RenGuard protected?

If so, how?

ThanksWhat bot were you thinking of regulating the server with, while providing half RenGuard?

NGSGuard (a mIRC regulation bot made by zeroverve)

Mainly a geared towards CTF since that's what the main server mode is.

Great! If he could either PM me or email me via the email address in my profile, it would be greatly appriciated!

Thanks!

Didn't realize my email wasn't showing in my profile... Sorry!

I have fixed this, and am hoping for further information on how to do such as soon as you're able!

Thanks!
