i would be able to manually rename it if there wasnt a file already named that. do i delete the original scripts.dll then rename it?

find the scripts.dll that is 1.99mb....rename it to scripts2

then add jonathan wilson's scripts.dll to the same folder

thanks for the help yall, got it working. it had created a scripts2.dll already, so i moved the scripts2.dll to my desktop where it wouldnt effect the game and renamed the original scripts.dll scripts2. then i changed scriptsx to scripts.dll and it works now.
