Hi my brenbot has been screwed up lately and I get this error when I load it...

"server: error 11004 creating socket: Unknown error"

Can someone please help me? I've tried reinstalling but it still won't work including all the commands:\

Ouch, that's a bad one. Haven't seen a fix for it yet. All I know is that it has something to do with resolving ip's or so.

[http://msdn.microsoft.com/library/default.asp?url=/library/en-us/winsock/winsock/winsock\\_reference.asp](http://msdn.microsoft.com/library/default.asp?url=/library/en-us/winsock/winsock/winsock_reference.asp)

Quote:WSANO\_DATA

11004

Valid name, no data record of requested type.

The requested name is valid and was found in the database, but it does not have the correct associated data being resolved for. The usual example for this is a host name-to-address translation attempt (using `gethostbyname` or `WSAAsyncGetHostByName`) which uses the DNS (Domain Name Server). An MX record is returned but no A record—indicating the host itself exists, but is not directly reachable.

My guess is that a reverse-lookup on your IP returned a domain, which when looking up that domain, your IP address was not a part of, or some other silly domain resolution error. Contact your ISP to verify that the your reverse lookup exists and is correct.

Nope, it has something to do with the gamespy reporting stuff in Brenbot. I already talked with mac about this, and it seems he has the only Brenbot

---

which does not have this error He said he will have a look at it for the next versions.
