---

This time I got ALL the AGT problems.  
It will stop shooting you when the PP goes down or when its killed.  
And it will fire more than one missile.  
The reason there have been so many AGT problems this release is because, some time ago I wrote a clone of the AGT script (JFW\_Advanced\_Guard\_Tower/JFW\_Advanced\_Guard\_Tower\_Gun/JFW\_Advanced\_Guard\_Tower\_Missile) and (unbeknownst to me) these scripts have been broken ever since they were written. It is a problem for 2.1 release because in 2.1 I added stuff to use my scripts instead of the stock westwood ones and also added code to help make the AGT missile/guns objects resistant to being killed by cheaters (like the PT fix that was done a while back)  
The AGT weapons do appear on Field in my own tests so any problems with that are not scripts.dll related.  
Also, I have confirmed that the DONATE command is working (in that I actually see calls to take money away and add money happening) so if that is broken, its also probably not the scripts.dll

get it from <http://www.sourceforge.net/projects/rentools/>

With any luck, this fixes all the 2.1 problems (and there wont be a 2.1.3)

You can also get an installer for scripts.dll 2.1.2 from  
<http://www.4amdevlabs.com/scripts212setup.exe>

Maybe I did something wrong but me and some others after installing them our renegades started to crash every 30 or so mins.

Is it because these scripts are only for FDS's or what?

They work on Renegade Client perfectly.

When it crashes, copy & paste your \_except.txt to jonwil. he cannot resolve bugs if he doesn't know how they are caused

\*crys\*

well, tell me if i can provide you with any more information, for the time being i'm going back to 2.1.1

---

Subject: scripts.dll 2.1.2 is out

Posted by [jonwil](#) on Sat, 23 Apr 2005 07:19:10 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

So 2.1.1 doesnt crash but 2.1.2 does?

hmmm, there is one more thing you can do

Go here:

<http://www.dependencywalker.com/>

Download the latest version

open game.exe

go to "profile-start profiling"

Clear all checkboxes.

Click ok

Play the game untill it crashes.

Then, in depends.exe, down the bottom you should see something like Started "GAME2.EXE" (process 0x8C4) at address 0x00400000.

then lines like Loaded "NTDLL.DLL" at address 0x7C900000.

Post the whole bit from "Started game2.exe" down to Exited "GAME2.EXE".

And also post the \_except.txt from the crash.

Also, post your operating system specs (e.g. Windows 98, Windows XP, Windows XP with Service Pack 2)

[View Forum Message](#) <> [Reply to Message](#)

---

lol, i used 2.1.1 for 15 minutes b4, it didn't have a chance to crash... i found that it DOES crash, i have noticed one thing, the crashing versions of scripts comes with a bhs.dll which doubles in size, i'm gonna try to use the scripts 2.1.2 with the old BHS.DLL... i'll post resault in 20-30 min

\*fingers crossed\*

edit: downloaded "Dependency Walker 2.1"

ok, this is what the output was for the dependency walker: (the game never opened)

i'm gonna run it with the ld BHS.dll now (well, gonna try)

Started "GAME.EXE" (process 0xD64) at address 0x00400000.

Loaded "NTDLL.DLL" at address 0x7C900000.

Loaded "KERNEL32.DLL" at address 0x7C800000.

Loaded "USER32.DLL" at address 0x77D40000.

Loaded "GDI32.DLL" at address 0x77F10000.

Loaded "SHELL32.DLL" at address 0x7C9C0000.

Loaded "ADVAPI32.DLL" at address 0x77DD0000.  
Loaded "RPCRT4.DLL" at address 0x77E70000.  
Loaded "MSVCRT.DLL" at address 0x77C10000.  
Loaded "SHLWAPI.DLL" at address 0x77F60000.  
Entrypoint reached. All implicit modules have been loaded.  
Loaded "COMCTL32.DLL" at address 0x773D0000.  
Loaded "COMCTL32.DLL" at address 0x5D090000.  
Loaded "WS2\_32.DLL" at address 0x71AB0000.  
Loaded "WS2HELP.DLL" at address 0x71AA0000.  
Second chance exception 0xC0000005 (Access Violation) occurred at address 0x00EB753D.  
Exited "GAME.EXE" (process 0xD64) with code -1073741819 (0xC0000005).

Quote:hasn't crashed!)

ok heres what i think, cos i ran it with the 2.1.2 scripts and the old BHS.dll == NO CRASH

These things i've tryed:

new bhs.dll + new scripts + RG = fast load + crash

new bhs.dll + new scripts (not running rg) + depends.exe (not shore if depends.exe makes a difference)= fast load (no crash, tested for 45min)

old BHS.dll + new scripts = normal load (no crash, tested for 1 hour)

old BHS + old scripts = normal load (no crash)

---

It's unlikely that RG causes the crash.

---

although there is a possibility... but it's not possible that RG causes crash on itself, it something to do with BHS.dll and RG's interaction (well, i think)

---

RG doesn't interact with BHS.dll. It's probably just some crappy coding causing the problem.

we have used the newest bhs.dll on a clanserver  
all members with the newest one (bhs.dll from scripts2.1) get kicked @same time , all have the same error message , 6 peeps crashed on same time , all on another pc configuration , there must be a major bug in bhs.dll

---

You cannot use a scripts 2.0-based SSAOW (which it currently is) with a scripts2.1-based bhs.dll. This will cause problems.

You may only use a scripts 2.1-based bhs.dll with a scripts 2.1-based scripts.dll on your server and client

---

I am getting reports of crashes in 2.1.2 from a few people but I cant actually link the crash logs back to the faulty code.  
So I have no idea what might be causing the crashes

I used the scripts.dll and bhs.dll 2.1.2 from SF and my game crashed several times. So I did an uninstall and reinstalled game/1.037/djlaptop\_cd\_crack/rengaard/cp1 and it worked fine. Thinking I made a mistake I used the utility provided under this same topic to install 2.1.2 and it crashed. I did the aforementioned uninstall reinstall and used the 2.1.1 utility to see if it crashed, and it did crash. I waited around for an answer and saw no progress so I decided to try it again. This time I only changed the scripts and bhs from 2.1.2 with the ones in the renegade file, and it crashed. I took the new scripts back out put the old one back in, and it crashed. I put the new scripts back in and took the old one out, then took the new bhs out and put the old one back in and it hasn't crashed so far. Damn, now I'm confused. So in summery it is  
game/1.037/djlaptop\_cd\_crack/rengaard/cp1/scripts 2.1.2/bhs.dll (I asume this is from cp1) 60.5 KB (61,952 bytes)

I really like the client log that bhs has so any help would be appreciated.

BTW I have this I have this from 1 of my logs that says a mod is using big head. Is this true or is it a smart ass comment from BRenBot?

I'm not sure but I think the problem is with a windows security feature. while I was posting the previous rant I right clicked on scripts.dll to get the size. At the bottom of properties it had an unblock button. I unblocked scripts, then put bhs.dll back into my renegade folder and did the same. So far so good.

"!setjoin is running big head" I don't get it. What is this you speak of?

You can set a message, that will be displayer when you join the server  
with !setjoin

Oh, I see said the blind man. I appreciate your knowledge and wisdom. I went back to the original bhs.dll with the new scripte.dll from the 2.1.2 Is this a bad combination? I read that the windows XP service pac 2 has caused a lot of problems with some applications. I personally have this OS configuration.  
Is this a common theme with the users that have problems with the new bhs.dll?
