Hello, I want to host a server on my computer, i have very fast internet and i want to have all of the commands such as: !rg name or !vote kick (name) <reason> etc etc... I have no clue where to start or what to download, I also want to play in the server too.... Anyone have any suggestions on where to start? I want it to be rengaured supported too....

Get Renegade FDS, and a serial. Then you'll need to download BR.net or Brenbot. You have to know a couple of things about the fds to configure it.

Once that's done you are basically set.

But what's a fast internet conn? Download is nice but it isn't what your server needs. It's the upload. And something like a Dual Core cpu to run renny, and Renegade at the same time, or another machine on your network
