What files do I need to set up a brenbot to work on the client server but not the fds? I know i need the brenbot, but what else? My friend did this and it even made his login name have a lighning bolt next to it. But what files do i need.

I am not hosting a fds just a client.

This really should not be in this forum. Since you are already a forum for so long you should know that does not belong here.

Brenbot is designed to work in unison with the FDS. It won't work with just the client.

Now I just need a FDS serial number but they ran out. Where can I get one or does anyone have a serial I can use?
