see that little check mark at the bottom of the dialog window??that's why the window pops up.....it's not a virus.You have told your computer to always check before opening any new executables by selecting that option.Eric.

"This TYPE of file COULD harm your computer IF it contains malicious code." - Notice how it says it "could" contain a virus. - Notice how it says "if". - And the TYPE of file is .exe = it is \*possible\*

---

any executable application has a virus. You have to ask yourself, do you trust the ftp you are downloading from? Do you TRUST Westwood?The answer is NO YOU HAVE NOT FOUND A VIRUS!That program you use will ask you the same question every time you try and download a exe file (as long as you have that button ticked!).

ROTFLMAO Where'd that come from?CyborgDC Recruit Member # 17241 says: quote: I am asking someone to download it and see if there is any I don't want my comp \*\*\*\*ed up.I have at least important stuff on my comp unlike most of yall. Harddrive wasting nothingness. ROTFLMAO How many hard drives have you burnt up this week Bumpaneer?loloh....by the way.....how many hard drives do you have CyborgDC?I have a 10 gig,an 80 gig hot swapable,and a zip250 for e-mail storage.....you think i could fill those up in a week or two?I know my computer inside and out.....it's a work station and game machine.....nothing more....i dont keep important numbers on it....i make frequent backups.....and i regularly reformat and install my OS and hardware drivers to prevent trojan virus attacks by just killing them.I've had the same hard drive set up for two years now and i havent had to replace or upgrade any components other than the cpu cooler fan since i built it.The point is.....we here in the mod community trust Westwood studios.....they have always been up on their game.....and if it's for download on their server(westwood ftp) then it's safe and virus free.As i said before.....and i thought i was being tactfull enough...but i guess not.Dont get afraid of getting a virus every time that window pops up.....it is popping up because you told it to pop up every time you download or open a new executable [.exe file format] .....if you are that concerned then get virus protection software.Eric.

The word you've entered isn't in the dictionary. Click on a spelling suggestion below or try again using the Dictionary search box to the right. Suggestions for proverted: 1. perverted 2. proverbed 3. provender 4. propertied 5. purported 6. prevented 7. perforated 8. privateered 9. privateer 10. perverterhad to look that one up perverted - maybe, but definately not towards boys. poonanie... mmmmm...

Harddrive wasting nothingness.You are soo supited! If you download another .exe file it will come up. Its just a warning file so always have your viurs cheaker ready.I know this beucase i have the same thing but i'm not fook going made like you. Its just a warning so you won't get virus on your PC.

xXSoul\_SlayerXx well.....the ps1 games arent really roms....the ones i have are actually backup copies of games i have.....most of them i actually made images of and play them directly from my hard drive using a virtual cdrom emulator(daemon)You will be lucky to find a working rom for the ps1 online.....my suggestion would be to either use your original game cds or use copied game cds....either will work.My ps1 emulator is a store bought copy of bleem.Eric.
