Ok, listen up. There are different compressions that can be used to make a .AVI movie. Just because your computer can play one type of .AVI doesn't mean it can play them all. The movies you have are most likely DivX, so you will need the codec. If you right click on the movie, and go to properties, you should be able to see info about it. You need to make sure you have both the video and audio codecs necessary to play the movie.~Bumpaneer
