I try to setup a bot

TS -> IRC

(Yeah i know this is renegade forum but)

i thought maybe someone here got a forwarder of the server.log(TS2.Server)

i saw there is a BCServ_Forwarder created by VlokyBot.

First i saw i thought maybe i can do it with that program but there you need to put you

renegadeFDS map into the setting file not the full path of the logfile

can someone make for me that you need to put the full path of the logfile into the setting file or

give me just tips how i can make my bot
